Cher Ami, je viens d'avoir le résultat de biotinidase de votre patient:  
**Il est déficitaire: votre patient n'a aucune réaction.**

Il n'y a pas de chiffre car il s'agit d'un dosage 1/2 quantitatif par réaction colorée. Bravo pour ce beau diagnostic. Il faut convaincre les parents et plus tard l'enfant de la nécessité de traiter par biotine sans interruption

Pr H.Ogier De Beauly

Hop.Robert Debré

**Conclusions**

- ▶ Targeted screening of metabolic diseases possible but LIMITED
- ▶ Providing active educational programme (nurses, physicians, biochemists, genetician)
- ▶ Interprofessional educational programme
- ▶ Consensus statements by experts
- ▶ Audit and follow-up

→ NATIONAL GENETIC MEDICAL COMITY

This section is titled "Conclusions" in red. It contains a bulleted list of five items, each preceded by a red triangle symbol. The last item in the list has a red arrow pointing to the text "NATIONAL GENETIC MEDICAL COMITY". To the right of the text area is a small square inset image showing several hands from different people stacked together in a vertical column, symbolizing teamwork or a collaborative effort.
